BIRMINGHAM, ENGLAND.

## To the Fraternity.

**I**N offering this Circular to the Fraternity, it is with the utmost confidence in my ability to produce work that is up-to-date and sure to please in every respect. The Gaffs which I make are of the very best steel and of the highest class of workmanship possible, so as to keep abreast of the demand for Gaffs that will do the best execution for amateur and professional alike, and no matter what you pay you cannot better them at any price anywhere. I shall appreciate the favour of a trial order to convince you of the quality and the reasonable prices at which they are offered to the Fraternity.

All Gaffs are strictly hand-made, and forged from the best English Steel obtainable for the purpose.

## HINTS TO REMEMBER.

I ask my patrons to give me as much time as possible so as to avoid disappointment, as I often get "hurry up" orders, so do not leave till the last minute in ordering. Please state length of blade, and give number in catalogue of Gaff required, as all orders are taken in turn, to be fair to one and all.

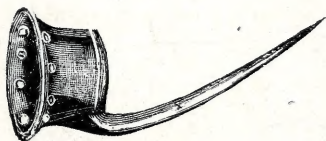

Anyone desiring a different set of blades, kindly send sketch, or pattern Gaff if possible.

Send money by Postal Order, Post Office Money Order, Registered Letter, or Dollar Notes.

All Gaffs leathered ready for the pit and fully warranted to stand. I have made Gaffs now for many years, and have sent them to all parts of the world. I guarantee every pair of Gaffs, and should they bend or break in a fair fight, I will replace them free of charge to the party sending me the broken or bent Gaffs.

HEELING.—“ Let your fowl be held so that the inside of the leg will be perfectly level, then take your thumb and fore-finger and work the back toe of the fowl. While doing this you will see the leader of the leg rise and fall at the upper joint. You will set the right gaff on a line with the outside of the leader at the upper joint of the leg, and the left gaff you will set on a line with the inside of the leader at the upper joint. Be careful not to set the gaff too far in, as it would cause the cock to cut himself.”

150

**No. 2.**

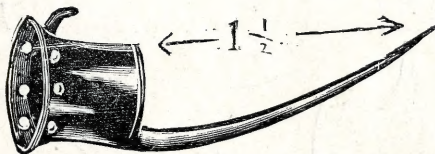

Showing  $1/14$  in. length.

Socket  $3/8$  in. long,  $7/16$  in. hole.

Blade, any length required.
